## ENVIRONMENTAL PRODUCT DECLARATION

In accordance with ISO 14025 and EN 15804:2012+A2:2019/AC:2021 for:

### Evolight S P - Bitulight P Polyflex Light P - Antiradice Light P

Programme:	The International EPD® System; <a href="http://www.environdec.com">www.environdec.com</a>
Programme operator:	EPD International AB
EPD registration number:	S-P-08546
Publication date:	2023-03-23
Valid until:	2028-03-22
Geographical scope:	International

An EPD should provide current information and may be updated if conditions change. The stated validity is therefore subject to the continued registration and publication at [www.environdec.com](http://www.environdec.com).

## 1. COMPANY DESCRIPTION / GOAL & SCOPE

The Company's headquarter is located in Ponte di Piave, Treviso (Italy). Over 90.000 m<sup>2</sup> of surface, 25.000 m<sup>2</sup> covered, 4 production lines of polymer-bitumen membranes and three production lines of synthetic PVC-P and TPO/FPO membranes.

In October 2008 Polyglass was taken over by the MAPEI Group, an international Company in the chemical industry for construction, with 86 production plants in 5 continents, in 36 countries.

Polyglass SpA is ISO 14001 certified since 2010, ISO 9001 since 1995 and since 2022 has obtained the ISO 45001:2018 too.

The goal of the study is to provide necessary data and documentation to produce an EPD according to the requirements of PCR Environdec (version 1.11, 2021-02-05) under EN 15804:2012+A2:2019/AC:2021 and to have more comprehension about the environmental impacts related to **Evolight S P**, **Bitulight P**, **Polyflex Light P** and **Antiradice Light P** manufactured in Polyglass SpA located in Ponte di Piave (TV-Italy), including packing of the finished products.

Target audiences of the study are customers and other parties with an interest in the environmental impacts of **Evolight S P**, **Bitulight P**, **Polyflex Light P** and **Antiradice Light P**.

This analysis shall not support comparative assertions intended to be disclosed to the public.

## 2. PRODUCT DESCRIPTION

Evolight S P, Bitulight P, Polyflex Light P and Antiradice Light P are prefabricated elastomeric-plastomeric membranes offering good performance, by virtue of a higher percentage of polymers. Their special formulation, comprising the exclusive REOXTHENE® Ultralight Technology compound also results in a unique weight-to-thickness ratio of their kind.

Evolight S P, Bitulight P, Polyflex Light P and Antiradice Light P are compliant with European legislation and it is sold with different packaging, as follow:

- Pallet: 23 rolls per pallet in average
- Length of rolls: 10 m
- Width of rolls: 1 m

## 3. CONTENT DECLARATION

The main components and ancillary materials of Evolight S P, Bitulight P, Polyflex Light P and Antiradice Light P are the following.

**Table 1: Composition**

Materials	Percentage (%)
Bitumen	50 - 70
Polymers	10 - 20 (10% recycled pre-consumer)
Filler	10 - 20
Reinforcing material	0 - 5 (4% recycled)
Other additives	0 - 2
Packaging Materials	Percentage (%)
Wood	< 2,5
Plastic	< 0,5

The product does not contain a concentration higher than 0,1% (by unit weight) of either carcinogenic substances or substances of very high concern (SVHC) on the REACH Candidate List published by the European Chemicals Agency.

## 4. DECLARED UNIT AND REFERENCE SERVICE LIFE

The declared unit is 1m<sup>2</sup> of packaged finished product having a 4 mm thickness (average areic mass: 3,83 kg/m<sup>2</sup>).

Packaging materials include:

- Wooden pallet
- LDPE and PPL used as wrapping material

## 5. SYSTEM BOUNDARIES & ADDITIONAL TECHNICAL INFORMATION

The approach is "cradle to gate" (A1-A3) with modules C1-C4 and module D and optional modules (A4 - A5):

- A1 - A3 (Product stage): extraction and transport of raw materials, packaging included, production process
- A4 - A5 (Construction process stage): transport of the finished product to final customers and installation into the building with incineration of the packaging material.
- C1 - C4 (End of life stage): collection rate of 100% as C&D waste considering an end of waste scenario with recycling, incineration and disposal.
- D (Resource recovery stage): benefits and loads of energy recovery and recycling of installation and demolition wastes are considered.

A brief description of production process is the following:

The bituminous membrane production is an impregnation process with an internal carrier (reinforcement) made of fiberglass or non-woven polyester. Raw materials such as bitumen, resins, filler and other additives are first put inside a primary mixer where polymers and additives are melted at 200 °C with bitumen and filler. After blending for 4/5 hours, the compound is pumped into a secondary mixer that has the aim to fulfil the impregnation vat, where the carrier will be impregnated before calendaring. Then the membrane is cooled in a water-cooling apparatus and at the end of the process, the product is wound into rolls and palletized.

## 6. CUT-OFF RULES & ALLOCATION

Criteria for the exclusion of inputs and outputs (cut-off rules) in the LCA, information modules and any additional information are intended to support an efficient calculation procedure. They are not applied in order to hide data.

The following procedure is followed for the exclusion of inputs and outputs:

- All inputs and outputs to a unit process, for which data are available, are included in the calculation.
- Less than 1% of the total mass inputs/outputs of the unit process A3, are cut off (see Table 6).

Input flows are covered for the whole formula.

**Table 6: Cut-off criteria**

Process excluded from study	Cut-off criteria	Quantified contribution from process
A3: production (auxiliary materials)	Less than 10-4 kg/kg of finished product	Sensitivity study demonstrates a relative contribution lower than 0,5%
A3: production (particle emissions to air)	Less than 10-4 kg/kg of finished product	Sensitivity study demonstrates a relative contribution lower than 0,5%

For the allocation procedure and principles, consider the following table (Table 7).

**Table 7: Allocation procedure and principles**

Module	Allocation Principle
A1	All data are referred to 1 m <sup>2</sup> of product - A1: electricity is allocated to the reference production line
A3	All data are referred to 1 m <sup>2</sup> of packaged product. - A3-wastes: the data are allocated to the whole plant production and to the reference production line

## 7. ENVIRONMENTAL PERFORMANCE AND INTERPRETATION

The following tables show the environmental impacts for the products considered according to the requirements of EN15804:2012+A2:2019/AC:2021. The results are referred to the declared unit (see § 4). The additional environmental indicators are not declared.

**Table 27: Antiradice Light P - Information on biogenic carbon content at the factory gate referred to 1 m<sup>2</sup> of packaged finished product**

Indicator	Unit	Quantity
Biogenic carbon content in packaging	kg C	4,20E-02
Biogenic carbon content in product	kg C	0,00E+00

Tables above show absolute results for each of environmental impact categories. They clearly indicate that product stage (A1 - A3) has the highest contribution for each of them and accounts for up to 80% of the total impact in the whole system boundary.

In particular, bitumen, polymers and reinforcing materials, which are some of the main components in **Evolight S P**, **Bitulight S P**, **Polyflex Light P** and **Antiradice Light P** formulations, carry a significant impact for all environmental categories.

In terms of GWP, module A5 gives a not negligible contribution especially in the biogenic carbon impact category. This is due to the disposal of the packaging that is the principal responsible of the biogenic carbon content.

Referring to biogenic carbon the negative impacts of raw materials and packaging (A1 and A3) are compensated by the disposal of them in the modules A5 and C3.

Transportation modules, especially A4, have relevant importance in terms of GW<sub>PLUUC</sub>, while the contribution became less relevant in the other environmental categories.

Figure 5: Reoxthene product application

The following table shows the relative contribution for all environmental categories considered in this EPD.

**Table 28: Environmental Impact as percentage of Polyflex Light P**

More details about electrical mix used in this EPD is shown below:

All data included in table above refer to a period between 2018 and 2021; the most relevant ones are specific from supplier, while the others (i.e. transport and minor contribution dataset), come from European and global databases.

All datasets are not more than 10 years old according to EN 15804 §6.3.8.2 "Data quality requirements".

Primary data concern the year 2021 and represent the whole annual production.

The Quality level concerning datasets used in the EPD can be considered as "very good" or "good" according to Annex E of the EN 15804 (current version).

## 9. REQUISITE EVIDENCE

### 9.1 Recycled content

Products	Recycled material content (Pre-Consumer)
Evolight S P	15%
Bitulight P	15%
Polyflex Light	15%
Antiradice Light P	15%

### 9.2 Disassembly

The finished product is potentially suitable for disassembly through selective demolition.

### 9.3 Biogenic Carbon content

Biogenic carbon content at the factory gate referred to 1 kg of product with packaging is 0,00E+00

## 10. VERIFICATION AND REGISTRATION

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but from different programmes may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804.

For further information about comparability, see EN 15804 and ISO 14025.
